Hi,

from where you have that information?

As i know i can do only one instance in XE, and i did that.

I did ora and turned it on (before turned off XE) .In this instance i did new database ora as i wrote before.

This database works fine as i said imp/exp works ok.

impdp/expdp don't

Strange is that, when I do this in XE database everything works fine, but when I create new database ora I have this error.

Can somebody help me, what i do wrong?

IIRC (and that would of course be documented) XE allows one and only one database, and it MUST be named XE.
