Secure your web server with cache, load-balancing, bw limits, configurable NTLM/HTML/HTTP/1.1-digest/basic authentication and 256-bit industry strength SSL/TLS encryption, authentication, bandwidth limiting and load balancing with failover protection as well as GZip acceleration and link translator, anti hot-linking and only the best architectural design and highest performance and security for the Windows platform by utilizing many clients/thread approach.

Features:

Memory cache implemented for 2Gbps performance with single (core) 32-bit Pentium/Athlon/Duo Core 2

256-bit SSL/TLS accelerator with support for OpenSSL hardware cards and self-signed certificate creation

Load balancing in URL-aware fashion: point each domain/path to different/same target LAN server/port

Anti hot-linking feature enables webmasters to control other sites linking to their multimedia content—prevents leeching of bandwidth

URL Rewrite with regular expressions provides a descent way to simplify links for search engines and other sites

Bandwidth limiting per URL rule per IP/port

GZip compression accelerator with configurable compression rates for each object extension

Failover protection with both ICMP and HTTP server validation

Cookies created make session persistence possible among client-to-target-server matching

Filter/pass firewall: Filter with respect to IP, reverse DNS and even client IP country

Fastream IQ Reverse Proxy 1.5.0R

Client connections pooled with dynamic load determination algorithm

High performance on-the-fly HTML link transformer

DynDNS.org and No-IP.com dynamic DNS auto updater client built-in

User-friendly HTTP/XML controller interface for remote admin access

HTTP/1.1 basic and digest authorization with users definable per URL rule as well as Windows NTLM

Supports W3C Extended Log Format with selectable fields and NFServer v2 screen and file logging--configurations setable in URL granularity
