And to anticipate a possible misunderstanding on the OP's part (from his post in another thread), renaming an MP3 file will not change the track name tag that's inside the file. Doing that requires an application that can edit MP3 tags.

So that's why some titles are not modified after I've renamed them!
What app is recommended for getting in there to rename this completely?

TriTag can also fill tags from the file name and rename files from information found in the tags. Very nice (and free) app.
