Roy Schestowitz wrote:

The command line scares me due to usability matters. I find it hard to believe that effective interaction can be achieved without pointing devices and 'modifiability'. To me, CLI-based readers remain off bounds. The only

You're assuming a connection that's just not there, Roy. There's nothing about CLI-based readers that makes them not modifiable. I doubt that you could find any readers more modifiable than slrn and Gnus and probably tin. You can make extremely modifiable text-based clients; if one isn't, then that's simply a design choice, not a limitation of CLI.
