Anyone having problems getting on Bodog?

My app suddenly wouldn't connect and I can't get on the website either. I can't even ping the site. Other users of my ISP report the same thing. However, friends using other ISPs don't report anything wrong with Bodog. My incompetent ISP says they're undergoing "network restoration" but everything else including stuff like bodog.tv bodogbattle.com etc. still work.

They're having a dispute over their domain name.

They've set up a new domain name: <http://newbodog.com>.

Go there and download the client. Everything will work as normal after you do that.
