I am running a legal fully up to date Fritz 8 on my computer. I recently bought the Fritz Training, Andrew Martin, The ABC of Chess Openings DVD. It's very nice except I have a problem. How do I switch from one chapter to the next without the program crashing? There is no fast forward that I can see or chapter skip buttons that work, so I try to do it by closing the current window and then just clicking on another chapter. This leads to an error and I need to restart the program entirely.

This happens to me on two different machines. On one I am running XP Home Edition and the other XP Pro. I get the same error on both machines. Am I doing something wrong? The Chessbase Reader seemed to load with no problem and I am running WinMedia v10.

Thanks,

Jim
