Re: Antibiotic Rights

answer: I feel that in the 1950's it was discovered that some cancers and heart disease were caused by bacterial infections.

Example: Hodgkin's disease was known as a blood disease, and Endocarditis was known as a bacterial produced Heart disease.

>> In the 1950's an e-coli infection was known to cause tumors.

>

> What tumor was caused by an E-coli infection? Give your proof.

It was something that I had heard in the 1950's.

>> It's always been known that doctors could victimize patients.

>

> Politicians can victimize people. As can lawyers. As can any profession.

> Patients can victimize doctors even.

> health and sabotage are both words in the dictionary.

>> I always use my Husband's 1982 treatment that reflected how a doctor could discover new diseases by simply withholding antitumor antibiotics.

>

> and what, exactly, is an "antitumor antibiotic"? lol...

Bleomycin is an antitumor antibiotic. Doxorubicin is also an antitumor with antiviral activity. I have a very nice write-up from US Library that I would gladly share with you.

>

>> 1982 (September) Cellulitis, which appeared on the front of Hubby's right leg and was caused by blood abnormalities that resulted in Hubby's spending 10 days in isolation. No antibiotics were prescribed.

There were several blood abnormal that were present at the same time of the Cellulitis.

>

> Cellulitis is not caused by blood abnormalities. It is a skin infection

Blue Cross of Michigan paid for all or some portion of all the services.

lol.

>> 2005 Pre-Phenomena-like condition (Primarily treated with steroids).

When the condition was first noticed, I tried to give him some Mexicillin.

Re: Antibiotic Rights

Re: Antibiotic Rights

- >> Mexicillin would be better than no antibiotics at all.
- >
- > "Pre-phenomena-like condition"???

When doctors state Pre-phenomena, I find that as scary as Pre-Cancer (a term used in 1982).

- >There is no such thing as
- > "mexicillin".... is this a penicillin product imported from Mexico?

I had a hand infection. The doctor prescribed a steroid cream, which I was using for several months and the skin problem wasn't going away.

I wanted a streptomycin ointment, so I settled for a Mexican penicillin ointment, and penicillin and ampicillin pills.

In one week, the skin problem disappeared.

Yes, Mexicillin is a joke: What US citizen would go to a foreign country to purchase antibiotics, because he/she feels that steroids aren't a proper infection treatment?

- > It's nice that you're trying to partake in an adult conversation, but you

- Thank you for being so patient with me.
