Is anyone else unable to play it in HD? I keep getting told it won't run in PAL 50 when set to any of the HD modes. (I haven't bothered getting to the back of the unit to swap to low res.) If they can't make the demo work do they expect me to go out and buy it?

It is a quirk of a number of games. There is a fix for it. You need to hook up your 360 to a standard TV (or switch your HD to SD), go to dashboard settings and set the 360 to Pal 60, save and exit. You only need to do it the once.
