We are currently in a development that
doesn't allow dishes on the
walls – and would like to make the switch
from Virgin to Sky. I've
seen some dishes concealed as rocks/lamps
etc. Are any of these any
good, and would it be possible to run a Sky
HD and a regular sky
box off of one of them?

I have a patio mount, LNB at knee height, with small
evergreens
concealing it. Less windage, easy to get at, often shorter
co-ax so
better signal.
Works fine.
Criteria is that there should be no shadow from any
obstruction at
around 11am GMT, mid-day BST at the end of March, as
this is when
the satellite
is roughly the same elevation as the satellite.

What the fuck are you talking about?

If you don't know, why are you posting to a tech group? Ask your teacher
when you go back to school.

Re: Concealed dishes

OK, sad fucker.
